1 Introduction

1. The Electronic Communication Office of Iceland (ECOI) received updated data from market players for the first half of 2023 in October 2023. Figures for each geographical market, showing five data points from the end of June 2021 to the end of June 2023, can be found in sections 2 and 3 here below. The representation of data for each market is in the same manner as in sections 6.2 and 6.3 of the market analysis in Appendix A, the figures are explained in section 6.2.1.

2. Although these data for the first half of 2023 are now available, ECOI decided not to undertake the work of updating the entire market analysis with these data. ECOI studied the new data for each geographical market to see if they called for changes in the designation of an undertaking with significant market power. The result of this study was that there was a reason to change the assessment of significant market power in three geographical markets, i.e. in Súðavíkurbær in markets 3a and 3b, Vopnafjarðarbær in market 3a and Fljótshálsbær in market 3b. However, after a detailed additional investigation, the ECOI did not consider valid reasons to change the assessment regarding Seltjarnarnesbær despite an increase in Ljósleiðarinn's market share in that municipality. These changes in ECOI's conclusion resulting from the new data went through a national consultation, ECOI's second consultation in this case. In ECOI's third consultation, the Office changed its position on Míla's significant market power in Rangárbær eystri. The reason for that change was information provided by market participants during the first consultation which called for additional data collection leading to corrections of the data.

3. ECOI does not have more recent information on mobile network router connections but has added those connections to fixed network connections by the end of June 2023 in the same way as it was done for fixed network connections by the end of 2022. Information about mobile network router connections was from April 2023, and that information is therefore closer to information from June 2023 than December 2022.

4. When considering the numbers for coverage in the figures here below it should be noted that fibre penetration ratio can decrease between years in a geographical area. This can happen when the number of homes and companies increase and either there is no fibre installed in these addresses or that there is a delay in the registration of the fibre. This can also happen when a home or company is no longer registered as such causing a decrease in the number of homes and companies in certain municipality and the home/company did have a fibre connection.

3 Market 3b

8. There are 43 geographic markets in market 3b, they consist of area A where ECOI estimated that competition was probably present and area B where Míla has a high market share. The municipalities that do not fall under areas A and B or that ECOI wants to examine separately due to possible changes in the municipality are defined as one geographic market per municipality. These municipalities are⁵:
